GENERAL DIRECTIONS

MEASURING YOUR GAUGE

All knitting directions include a stitch gauge. The stitch gauge gives the number of stitches to the inch with the yarn and needle recommended in the pattern stitch. The directions are based on the given gauge. The gauge (or tension) at which you work controls the size of each finished piece. It is therefore essential to work to the gauge given for each item if you want it to be the correct size. To test gauge, cast on 20 or 30 stitches, using the needles specified. Work in the pattern stitch for 3". Smooth out your swatch and pin it down. Measure across 2" and place pins 2" apart. Count number of stitches between pins. If you have more stitches to the inch than directions specify, you are working too

tightly; use larger needles. If you have fewer stitches to the inch, you are working too loosely; use smaller needles.

Most patterns give a row gauge, too. Although the proper length does not usually depend on the row gauge (directions usually give lengths in inches rather than rows), in some patterns it is important to have the proper row gauge.

OUNCE/GRAM CONVERSIONS

28 grams = approximately 1 ounce
40 grams = approximately 1 1/3 ounces
50 grams = approximately 1 3/4 ounces
100 grams = approximately 3 1/2 ounces

TO FOLLOW DIRECTIONS

The asterisk (*) is used in directions to mark the beginning and end of any part of the directions that is to be repeated. For example, “* k 9, p 3, repeat from * 4 times” means to work directions after first * until second * is reached, then go back to first * 4 times more, 5 in all.

When parentheses () are used to show repetition, work directions in parentheses as many times as specified. For example, “(k 9, p 3) 4 times” means to do what is in () 4 times all together.
