Viking Kitchens

The Vikings are often pictured as large, blondish-red-haired men with braided beards, wearing thick, torn clothing and iron helmets with horns on them. Of course, the warriors would appear similar to this, but what was life like in their households,

when they weren't out sailing in their dragon-

masted ships and conquering unsuspecting Britons? One of the best places to start is the center of the house—the kitchen.

The hearth was definitely the most important equipment of the Viking home. Without it, there would be no food and no heat. Most of the cooking was done in an iron or clay kettle, but occasionally, a hearth or two had a pit directly outside where some food could be fried or roasted on a spit. Cooking stones—hand-sized stones heated in the fire—were immersed in liquids to make soup. When the stones had given off their heat, they would be placed back in the fire until hot. These stones would usually break after a few uses, but could easily be replaced. Cooking stones were never made of flint, because it would burst in the fire.

Spoons and ladles were often made of wood, or bone, but knives were commonly iron. Forks were not used at the table, but only to dish out meat from the cooking pot. Viking women used broken potshards for scraping ashes in the fire, or the larger pieces for baking bread on. Cooking was hard work, and the everyday life of the Viking family was a struggle to maintain life: to provide a roof over everyone's head, to stay warm and to prepare food.

During much of the year, it was easy to get the food, but it took a long time to prepare and had to be gathered, dried and put away for the long winter. However, to the Viking people, it meant their survival and they succeeded in bringing parts of their culture to other areas of the world.

The Table Fork

Sometimes it is difficult for us to imagine life without all the little conveniences we sometimes take for granted. Our ancestors from ages ago didn't have such things as running water, vehicles, refrigerators or even forks! The first table forks actually date before the year 1000, from the Middle East. Some forks that were made before 1600 (with up to five tines) still exist in museums today. However, a member of Italian nobility, probably a Byzantine Princess, introduced the first forks in Europe in the 11th century. It is said that this princess outraged the local populace and clergy because she wouldn't eat with her hands, but used her two-tined forks instead.

The fork had come to be used for fruits or foods with sticky sauces that would stain the fingers. This practice was not widespread, but in use only with courtesans, which led the Church to ban it as an "immoral influence."

These early forks had straight prongs, and not curved as we know them today, because they were mainly used for spearing food and holding it, rather than as an instrument to get food directly to the mouth. The curve was first introduced in 17th century France.

An inventory of silverware from Florence in 1361 lists forks among the valuable property, and the noble instrument also appeared in Italian cookbooks of the late 1400s. Even though they were known among many, still only a few members of the upper classes used them frequently. Even by the time of the Armada, forks had been used in Spain only by those high on the social scale.

From its initial introduction in Europe, it took almost five hundred years for the fork to work its way into use by the lower social classes. In 1600s England, however, people still saw the fork as being very Italian, as in Italy, even the merchant classes were allowed use of the fork.

The first fork known to have been made in England dates from the early 1600s. Elsewhere in Europe, makers of cutlery adopted the custom of making knives and forks in sets. In the 16th century, the better quality ones came in sets of 12 or more, encased in leather and included a serving fork. Because only the very wealthy could provide knives for their guest, it was more common for people to carry their own with them.
