IMPORTANT

When the commencing chain is made in crochet, a chain appears on the surface that is shown throughout our drawings. Behind this chain is a linking stitch that must be picked up when working into the commencing chain – for clarity in our diagrams we have omitted this link, but it is referred to in the basic stitches, i.e. insert hook into chain, picking up 2 loops. The **enlarged diagram** given below shows this in detail, and the hook should always be inserted under 2 loops, unless a pattern stated front or back loops only of the chain.

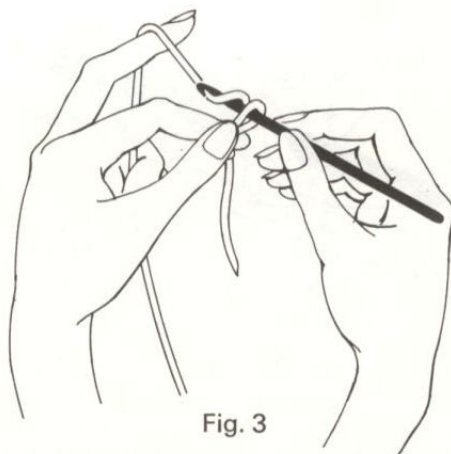

Fig. 3

Slip knot

Before you can make a chain a slip knot must be made (fig. 4). To do this, wind yarn once around first and second finger of the left hand clockwise. Insert hook into loop around fingers, yarn around hook and draw through.

BASIC STITCHES

Chain (ch.)

This is the foundation of crochet work. With yarn in position and the loop on the hook, pass the hook under the yarn held in left hand then catch the yarn with hook, draw yarn through loop on hook (fig. 5) repeat this movement until chain is desired length (fig. 6).

HINTS ON CROCHET

A Learn to work your commencing chain at an even tension. This is most essential to the appearance of the finished garment. Work with rhythm, and allow the yarn to flow evenly. Always hold your crochet hook and yarn as shown in the diagram (fig. 3) on page 5, as this hand position keeps the yarn in the right place so that it presents itself to the crochet hook for each stitch. This will enable you to maintain an even tension. All patterns are worked out at the tension quoted in the instructions, and this tension should be obtained to give a correct size garment. To test your tension, use the size hook recommended in the instructions and work the recommended tension sample. If the sample is larger, this means that your tension is looser than it should be and another piece should be worked on a smaller hook achieving the correct size. If your sample is smaller use a larger hook.

B Never count the loop on the hook throughout work.

C When working into commencing chain or a chain length, always pick up 2 loops on hook for a firmer shape, as illustrated under diagram on page 5.

D A number of chain have to be formed at the beginning of each row so that the hook and yarn are at the right height ready for working the next row. The required number of chains are usually stated in the instructions, but if not the following are recommended:

DOUBLE CROCHET = 1 chain

HALF TREBLE = 2 chain

TREBLE = 3 chain

DOUBLE TREBLE = 4 chain

TRIPLE TREBLE = 5 chain

For double crochet it is possible to turn with a double crochet into first stitch instead of 1 chain, miss first stitch.

The turning chain forms the first stitch of the row. Therefore, no stitch should be worked into the last stitch of the previous row unless it forms an increasing or is part of the pattern. This is usually referred to in the instructions as 'miss first stitch, double crochet or treble' according to the pattern worked in the row below.

E The word stitch(es) in a pattern refers to any stitch (or combination of stitches).

F At the end of the row the last stitch is worked into the turning chain of the previous row. The exact chain is usually stated and these are always counted from the bottom up.

G Always pick up 2 loops when working into a stitch on previous row unless the instructions tell you otherwise.

H A space is the gap between every stitch. When working a row of crochet a space exists between every stitch formed even though it may not always be noticeable, e.g. when working a pattern of just plain trebles, and a pattern reads, 'miss 3 spaces', then every space between every stitch must be counted. Spaces are sometimes enlarged by extra chains and this kind of space is often referred to as a '1 chain space', '2 chain space', etc. In order to work into a space insert the hook actually into the space itself and form the required stitch. The difference between a space and a loop is purely visual.

I When working shapings by slip stitching across a stated number of stitches, never work a slip stitch into the first stitch or count the first stitch of a row.

J Decreasings and increasings are used to shape the fabric such as armhole, neck and body shaping.

Decreasings for armhole and neck are usually made at the edge of the work, and slip stitches are used over the number of stitches recommended. Never work a slip stitch into the first stitch. The pattern is then worked to within a given number of stitches on the other side. When the work is turned, this means that decreasings have been made at each end of the row.

Decreasings for reducing the width of the fabric are usually made within the pattern row, and details of this type of decreasing are always given in Emu Leaflets, but as a general rule if this type of decreasing is required a stitch can be missed or a stitch can be partially made, left on the hook and worked with the next stitch.

When decreasing for shoulder shaping it is almost impossible to do this without small steps being made. This should be overcome in the making-up, when a dressmaker's seam should be used.

Increasing. When this is worked at the ends of the rows 2 stitches can be worked into the first and last stitch. This sometimes can be bulky, and it is better to work the increasings within the pattern row, and to do this a number of stitches can be worked into one stitch.

Where a larger amount of pattern is required, e.g. for Trousers shaping, a separate length of yarn is used to work a chain at either end of the fabric, and used as a commencing chain.

K After completing work, draw through loop on hook once more. Cut yarn and draw end through. This gives a secure finish, darn in ends, using a smaller crochet hook. Insert hook along edge on wrong side of work, and draw through end.

TENSION

We recommend that you test your tension before commencing the garment. A tension square to measure 4" x 4" should be worked. If your tension sample measures less than 4 inches across, then a size larger hook should be used. If, however, it is larger, then a size smaller hook should be used. Provided the tension quoted is obtained, your measurements will be as those given.
